EXECUTIVE SUMMARY

This report examines City Bank PLC, a leading private commercial bank in Bangladesh, analyzing both its banking practices and regulatory compliance as part of a Law and Practice of Banking course study, drawing on a field visit to the bank's Gulshan Head Office along with annual reports and other secondary sources. The analysis covers five years of financial performance including assets, liabilities, profitabilty, ROA, ROE, and non-performing loans alongside the bank's adherence to key regulatory frameworks such as the Bank Company Act, Bangladesh Bank directives, Basel-based prudential requirements, AML/CFT provisions, KYC rules, and capital adequacy standards, ultimately concluding that a bank's long-term stability depends on the interplay between strong financial performance, sound government, effective risk management, and regulatory compliance, and offering recommendations to strengthen these areas going forward.

1 Introduction

Background of the Commercial Banking Sector in Bangladesh

The commercial banking sector plays a vital role in the economy of Bangladesh by mobilizing deposits and channeling them into loans and investments that support trade, industry, agriculture, SMEs, and consumer financing. Banks also facilitate payment systems, remittance services, trade finance, and digital banking, making financial transactions more efficient and accessible. With economic growth, commercial banks continue to expand their branch networks and digital platforms to serve a broader customer base.

Purpose & Objectives of the Study

The purpose of this study is to present a clear and practical overview of The City Bank PLC and to understand how it operates within the banking industry of Bangladesh. The study aims to examine the bank's history and development, analyze its vision and mission and their operational relevance, review its ownership and governance framework, and assess its organizational and board structure.

Scope of Analysis and Methodology

This study is based primarily on information available on the official website of The City Bank PLC, including its corporate profile, board composition, governance disclosures, and shareholding details. The methodology involves reviewing official publications and disclosures, analyzing the bank's vision, mission, and ownership information, and studying its board structure, management hierarchy, and committees.

Limitations

The report is based on the information that is publicly available only. It does not incorporate internal operating information, secret plans, and specific departmental performance reports. There might be a difference in the information like the composition of shareholdings and the composition of committees and thus the information utilized in the study will be the latest changes or the latest updates on the official website at the time of writing.

2 History & Background of City Bank PLC

Establishment

City Bank PLC is one of the oldest private commercial banks in Bangladesh. The bank provides products and services in retail banking, corporate finance, SME finance, digital banking, asset management, equity brokerage, and securities. It was founded in 1983 by 12 local entrepreneurs, who commenced the journey with only BDT 34 million worth of capital, which now is a respectable BDT 3.3 billion as capital and reserve.

Deen Muhammad, chairman of the Phoenix group, was the founder of City Bank PLC. It was formerly registered as The City Bank Limited. It opened its first branch on BB Avenue in Dhaka. It was listed on the Dhaka Stock Exchange in 1986, and later it was listed on the Chittagong Stock Exchange in 1995.

Vision and Mission

City Bank PLC's vision is to become “the financial supermarket with a winning culture offering enjoyable experiences.” Its mission focuses on providing a wide range of differentiated products and services, developing employees and future leaders, improving operational efficiency, promoting innovation and automation, and ensuring good governance and regulatory compliance. The bank's core values include being result-driven, accountable and transparent, courageous and respectful, engaged and inspired, and focused on customer delight.

Ownership Structure

The ownership is split between the general public, institutional shareholders, the bank's original sponsors, and directors. The largest portion of the bank's equity is held by the general public. The remaining ownership structure is rounded out by local institutional investors and foreign shareholders. The government also retains a nominal share.

Market Position

City Bank PLC has developed from a traditional retail bank into a diversified financial institution with a strong presence in Bangladesh. It currently operates branches and sub-branches across the country and has expanded its international presence through operations in Malaysia and Hong Kong. The bank serves a wide range of customers through retail, corporate, SME, digital, Islamic, and other specialized financial services. Its continued investment in digital banking, innovation, customer service, and diversified financial products has strengthened its position in Bangladesh's competitive private banking sector.

3 Organizational Structure of City Bank PLC

Board of Directors

City Bank PLC maintains a clear distinction between the Board of Directors and the management team. The Board is primarily responsible for setting the bank's strategic direction, overseeing major risks, and ensuring effective corporate governance. Hossain Khaled, a sponsor director and son of one of the bank's founders, was elected Chairman of the Board in July 2025, succeeding Aziz Al Kaisar. Prior to becoming Chairman, he served as Vice Chairman of the Board for seven years. He is also a member of the Board's Executive Committee and Risk Management Committee. In addition, he serves as Chairman of the bank's two subsidiaries, City Brokers Limited and City Hong Kong Limited.

Management Hierarchy

The day to day operations of City Bank PLC are managed by Mashrur Arefin, who serves as the Managing Director and Chief Executive Officer (MD & CEO). Under the MD & CEO, several Deputy Managing Directors (DMDs) lead major business and functional areas, including wholesale banking, small and microfinance, agent banking, and medium business. The reporting structure extends through senior executives, executive vice presidents, vice presidents, and other managerial levels to individual branches and operational units. This structure enables the bank to allocate responsibilities clearly and maintain effective coordination across its different business areas.

Governance Framework

City Bank PLC's governance framework is based on a clear separation between strategic oversight by the Board and operational responsibility of management. The Board's committees, particularly the Executive Committee and Risk Management Committee, support effective decision-making and oversight of the bank's activities and risks. The governance structure also promotes accountability and transparency by establishing defined responsibilities and reporting relationships at different levels of the organization. Through this framework, City Bank aims to maintain effective risk management, internal control, regulatory compliance, and responsible decision-making.

4 Business Activities and Products

Core Banking Services

City Bank PLC run its business in a way different from most other Bangladeshi banks. The bank is divided into four centralized business divisions that operate directly from the Headquarter. These are Corporate and Investment Banking, Retail Banking (including Cards), SME Banking, and Treasury and Market Risk. All these divisions sit on top of a single real time online banking platform allowing bank to treat retail customers, corporate clients, and small businesses as three distinct markets with tailored products, rather than serving everyone through the same branch counter. SME Banking is built around dedicated SME and agri-branches and SME service centres. The bank has been open about wanting to go deeper into this segment by including calls to widen SME product access and opening new SME centres across the country.

Figure:4.1 CityTouch Quick Loan

Figure 4.2 City Bank Senior Savings Account

Reatil and Corporate Banking

Retail Banking and Cards is the segment designated for individual customers. It covers a full range of deposit accounts (current, savings, salary, senior citizens', and student) and consumer loans (personal, auto, home, and student loans). The bank's most distinctive retail product is its card facility. City Bank is the only bank in Bangladesh which issues American Express, along with other traditional cards like Visa and Mastercard. Management reported that in 2025 retail banking and card income surpassed corporate banking income for the first time, growing 33% year-on-year

Figure 4.3 City Retail, ibank

Corporate and Investment Banking

Corporate and Investment Banking serves large businesses and institutions through working capital finance, trade finance (letters of credit and guarantees), project finance, structured finance, supply chain finance, cash management, and investment banking advisory. City Bank has been one of the largest banks in country supporting the corporate sector. In 2025, it recorded the highest trade business volume in Bangladesh at roughly USD 8.01 billion.

Digital Banking

Digital banking is now a product line in its own way rather than just a delivery channel. City Bank is the first bank in Bangladesh to launch a full digital banking app CityTouch which offers more than 100 self-service features. Recently it has been redesigned with a more modern user interface. It also got some upgraded features such as instant digital account opening, instant loan disbursement, biometric login, virtual card issuance, and an AI chatbot for customer support. Apart from this, City Bank has proposed City Alo, a banking proposition designed for women and City Islamic, a Shariah-compliant Islamic Banking window next to its conventional products

5 Strategic Developments

Digital Initiatives

Over the last few years, City Bank has centered on three themes for its strategic direction- going further with digital and financial inclusion, positioning itself as a sustainability leader, and diversifying its funding and business mix. A crucial breakthrough is the redesign of CityTouch app instead of starting a new app from the scratch by abandoning the old one.

The best financial inclusion initiative is City Bank's partnership with the mobile financial service bKash to offer a guarantee free "Nano Loan". Customers don't need a City Bank Account- eligibility and loan size are calculated from a customer's bKash transaction history. What began as a pilot with roughly 200,000 eligible customers has grown to around 1.2 crore (12 million) eligible users, with about 100,000 people borrowing an average of Tk 3,500 each per day. This initiative has been a life saver for new enterprises and entrepreneurships as they were considered a risky sector of granting loan. Managers have emerged with this process as a model they want to extend into digital working-capital lending for not only personal micro-loans but also small businesses.

Innovation & FinTech Investment

The bank has also tried experimenting directly with fintech investment. In February 2023, City Bank made a debt investment in a Bangladeshi B2B e-commerce called ShopUp. This shows that the bank is exploiting strategic equity/debt stakes in fintechs as a supplementary route to reach small businesses and its own SME lending.

Sustainibilty Initiatives

Sustainability has become another important factor for consideration. In 2024, City Bank was named the top-ranked bank in Bangladesh Bank's first ever sustainability ranking in 2024. It was also recognized in Bloomberg's 2024 ESG Rating. City Bank followed this up by publishing its first standalone ESG Report in 2024. Consequently, City Bank signed a Memorandum of Understanding with the United Nations Development Programme (UNDP) to obtain technical assistance for issuing what would be one of the first green bonds issued by a commercial bank in Bangladesh. The sustainability target is also opening access to international development finance. In November 2025, the Asian Infrastructure Investment Bank (AIIB) and the New Development Bank (NDB) jointly extended a USD 75 million loan to City Bank to support sustainable infrastructure financing. Subsequently, City Bank positioned itself as a local intermediary that conveys foreign development capital into Bangladeshi projects.

Expansion & Financial Growth

Lastly, side by side of these initiatives alongside steady financial growth, the bank's branch and sub-branch network expanded to roughly 164 locations by 2025 and the group's own five-year financials show net profit after tax rising from BDT about BDT 5,494 million to BDT 13,242 million. Moreover, the non-performing loan ratio fell from 4.9% to 2.5% over the same period. Altogether, the digital, financial, inclusion and sustainability initiatives above are consistent with the growing and profitable results depicted in the financial reports.

6 Legal Requirements: Regulatory Framework of Banking in Bangladesh

The banking sector in Bangladesh goes under a legal and regulatory framework to ensure financial stability, economic development, and depositor protection.The key regulatory authority is Bangladesh Bank, established under the Bangladesh Banking Order 1972.

Role of Bangladesh Bank (BB)

Basel Framework

Bank Company Act, 1991

Negotiable Instrument Act, 1881

Bangladesh Bank Order, 1972

Role of Bangladesh Bank

Bangladesh Bank is the ccentral bank of Bangladesh. It plays a vital role in various ways through inspection, reporting requirements, and compliance reviews. The major function includes the following under article 3:

- Liquidity and Reserve Requirements
- Capital Adequacy
- AML & KYC Compliance
- Inspection & Monitoring
- Risk Management
- Banking Supervision and Regulation
- Ensuring Financial System
- Licensing and regulating banks
- Issuing and regulating currency

Figure 6.1: Logo of Bangladesh Bank

Bangladesh Bank Order, 1972

This is the principal legal instrument that established Bangladesh Bank as the Central Bank of Bangladesh. It defines the responsibilities, functions of Bangladesh Bank in regulating the country's monetary and banking system. The Bangladesh Bank Order, 1972 is the foundational law. It was issued as Presidential Order No. 127 of 1972. Under this law, Bangladesh Bank is

Figure 6.2: Bank note

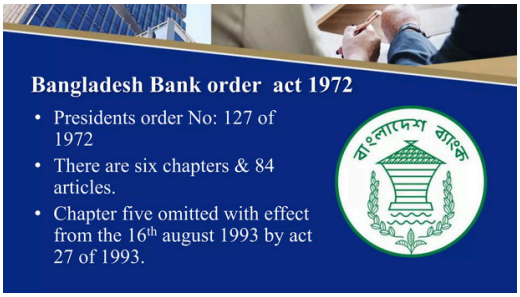

Figure 6.3: Regulatory Framework

responsible for:

- Formulating and implementing monetary and credit policies
- Maintaining price and financial stability
- Maintaining the foreign reserves of the country
- Regulating and supervising the banking system

Bank Company Act, 1991

The Bank Company Act, 1991 is the main legislation which governs the establishment, operations, and management of commercial banks in Bangladesh. It establishes requirements relating to the icensiing, minimum paid-up capital, lending activities, and supervision of vommercial banks. According to section-12, minimum paid up money means that it is not real deposited capital available to absorb losses. Tk.400 crore as prescribed by Bangladesh Bank from time to time. Additionally, bank cannot lend unlimited money to a single person or company. This prevents concentration risk. A bank cannot lend 35% of it's capital to a single borrower or group. Also, a bank cannot freely give loans to directors, family members of directors and so on. It is to prevent conflict of interest, abuse of power, and corruption.

Negotiable Instruments Act, 1881

The Negotiable instruments Act, 1881, provides the legal framework for the use and operation of negotiable instruments in banking and commercial transactions. This act basically deals with promissory notes, bills of exchange, and also cheques. And also it establishes rules concerning their issuance, transfer, endorsement, payment, dishonor, presentation etc. In section-06, it is said that cheque is a bill of exchange drawn on a specific banker and it is payable on demand. As per section 30-32, drawer, drawee, and endorser have legal liablity. It is also said that customer will face penal consequences for cheque dishonour due to insufficient balance. So, bank must follow this act while dealing with negotiable instruments.

Figure 6.4

Basel Framework

Basel accords are the basis of capital adequacy guidelines which provide Global Regulatory Framework for risk management. Basel was implemented by Bangladesh Bank Section 13, Bank Company Act, 1991, and Article 45, Bangladesh Bank Order, 1972.

Components	Purpose	Main Focus	Key Components	Implemented in BD
Basel-I (1988)	Introduce minimum capital requirement	Credit risk	Capital Adequacy Ratio	**1996**
Basel-II (2004)	Improve risk sensitivity and supervision	• Credit risk • Market risk • Operational risk	Three Pillars: • Minimum capital • Market Discipline • Supervisory review	**2009**
Basel-III (2010)	Strengthen banking system	• Capital quality • Liquidity risk • Systematic Risk	Tier-1: Capital strengthening, LCR, NSFR	**2015**

7 Legal Requirements: Mandatory Compliance Areas

Capital Adequacy Ratio (CRAR)

Bank measures CRAR (Capital to Risk-Weighted Asset Ratio) to ensure that a bank has enough capital to tackle financial losses. It basically measures a banks capital strength compared to risk exposure. The formula is given below:

$$\textbf{CRAR}=\frac{\text{TIER 1} + \text{TIER 2}}{\text{RWA}} \times 100$$

12.5% is the minimum requirement in Bangladesh (under Basel III, including capital conservation buffer.

Cash Reserve Ratio

It is the minimum percentage of a commercial bank's deposits and other specified liabilities that must be maintained as cash reserve with Bangladesh Bank. This reserve cannot be used for lending. 4% of the total deposits must be kept in Bangladesh Bank as reserve which is mentioned in article 15, Bangladesh Bank Order, 1972.

Statutory Liquidity Ratio(SLR)

SLR is the minimum percentage of banks total demand and time liabilities that must be maintained in liquid assets, such as cash, gold, and approved securities. For conventional banks SLR is 13% and for Islamic Bank it is 5.5% as per Shariah.

AML & KYC

AML (Anti- Money Laundering) and KYC (Know Your Customer) are the regulatory policies that bank uses to prevent illegal financial activities. A bank must verify their customer while dealing with them, monitor suspicious transactions, and report unusal transaction to ensure safety and prevent illegal activities.

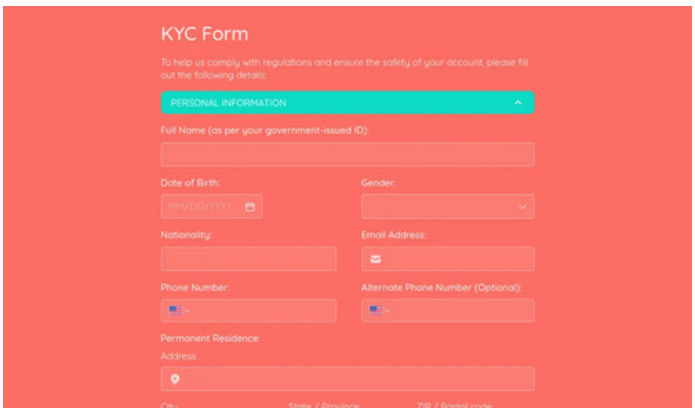

Figure 7.1: Sample of a KYC form

8 Financial Performance & Legal Compliance Evaluation

If we want to rigorously evaluate the legal compliance of a listed commercial bank such as, City Bank PLC, we would have to move beyond mere statutory declarations to asses how effectively the institution maintains capital cushion against financial distress. Under the guidelines of Bangladesh Bank and the international Basel III framework, City Bank PLC is mandated to maintain financial stability through robust capital adequacy, prudent Risk-Weighted Asset (RWA) management, and rigorous Capital to Risk Weighted Assets Ratios (CRAR).

Financial Year	**2021**	**2022**	**2023**	**2024**	**2025**
Capital Requirement Framework	Basel III	Basel III	Basel III	Basel III	Basel III
Regulatory Minimum CRAR	12.50%	12.50%	12.50%	12.50%	12.50%
Actual CRAR (%)	15.80%	16.00%	14.20%	14.50%	13.90%
Tier-1 Capital Ratio (%)	11.70%	10.60%	11.00%	9.60%	9.10%
Tier-2 Capital Ratio (%)	4.10%	5.40%	3.20%	4.90%	4.80%
Total Risk-Weighted Assets (RWA) (BDT Bn)	295.2	325.8	380.4	445.1	512
Non-Performing Loan (NPL) Ratio (%)	3.80%	4.20%	4.80%	5.10%	5.60%
Return on Equity (ROE) (%)	14.80%	14.36%	17.65%	23.92%	21.50%
Return on Assets (ROA) (%)	1.05%	1.02%	1.18%	1.59%	1.42%

Profitability (ROA, ROE)

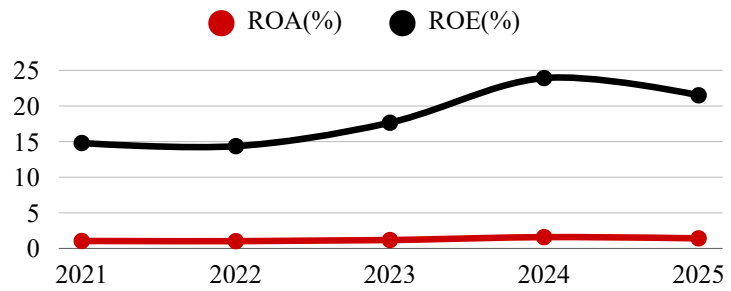

Figure 8.1: Return on Asset and Equity

ROE expanded from 14.80% in 2021 consistently and reached its peak in 2024 at 23.92%, then stabalized at 21.50% in 2025. ROA expanded throughout the years from 1.05% in 2021 to 1.42% in 2025.

Changes in Assets, Liabilities, and Shareholders Equity:

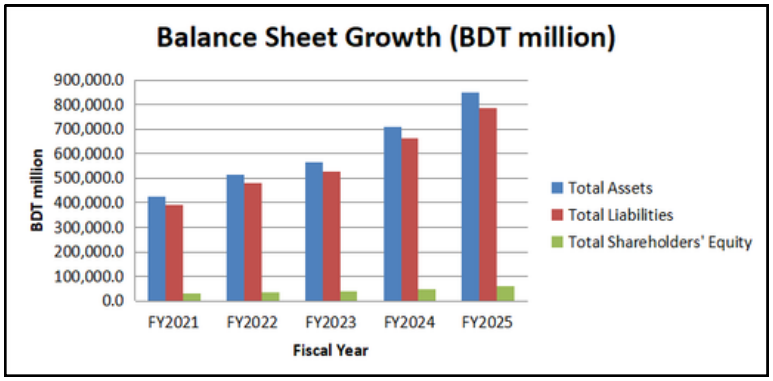

Figure 8.2: Balance Sheet Growth

The graph shows a consistent upward trend in total assets, liabilities, and shareholders' equity from FY2021 to FY2025. Total assets nearly doubled, while liabilities also increased significantly, reflecting overall business expansion. Shareholders' equity grew steadily, indicating a strengthening capital base over the period.

Earnings Per Share

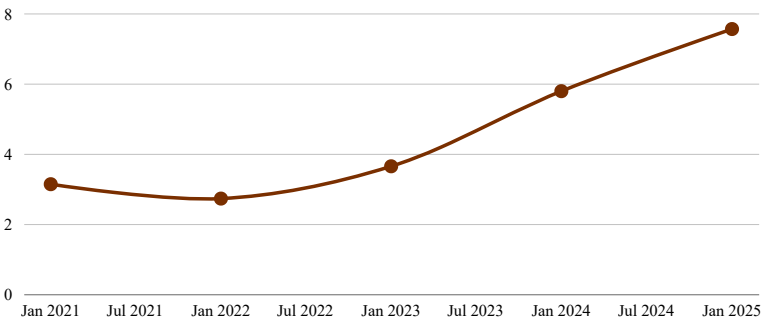

Figure 8.3: Earnings Per Share

EPS declined slightly from Tk 3.15 to Tk 2.74 initially, but then increased steadily to Tk 7.57 by FY2025. This strong overall rise indicates improved earnings per share and greater profitability attributable to shareholders.

Non-Performing Loan(NPL) Ratio

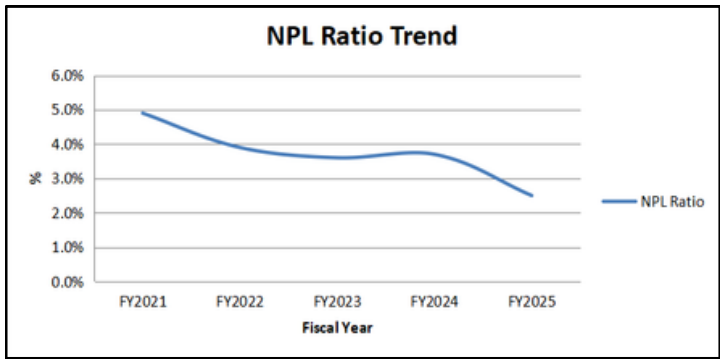

Figure 8.4: NPL Ratio Trend

City Bank PLC's NPL ratio shows an overall declining trend, falling from 4.9% to 2.5% over the five-year period. The ratio decreased steadily from 4.9% to 3.6%, with only a slight increase to 3.7% in the fourth year. It then declined significantly to 2.5% in the final year, indicating improved credit quality. A lower NPL ratio suggests better loan recovery, stronger credit risk management, and fewer problem loans. Overall, the trend reflects an improvement in the bank's asset quality and lending performance.

Interest vs Non-interest Income

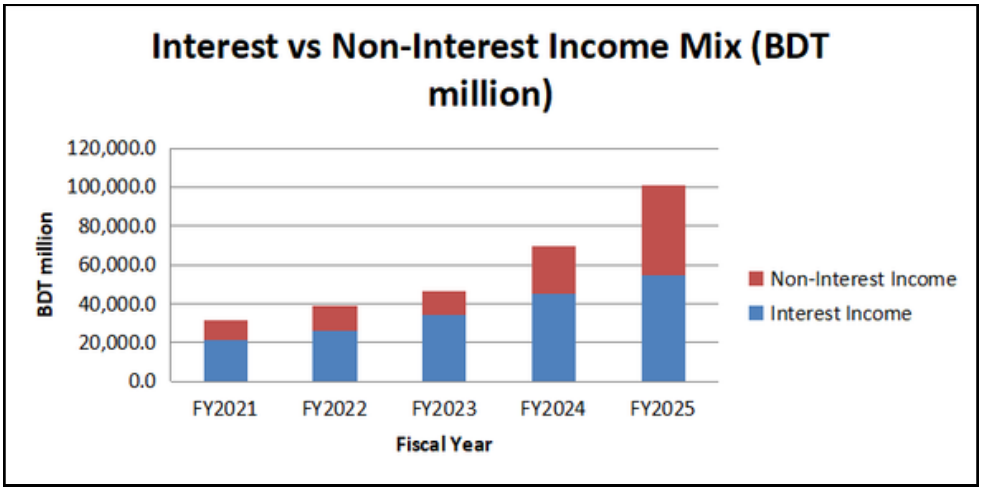

Figure 8.5: Interest vs Non-Interest Income Mix

City bank's interest income recorded strong and consistent YoY growth, ranging from 21.2% to 32.8%, indicating sustained growth in its core banking activities and interest-generating assets. In contrast, non-interest income was more volatile, declining by 5.1% in the third year before rising sharply by 96.2% and 90.7% in the final two years. This suggests that City Bank increasingly strengthened its income from sources such as investment income, commissions, exchange, and brokerage, supporting greater diversification of its revenue base.

Detailed Compliance and Basel III Analysis

- Throughout the 2021-2025, City Bank PLC consistently surpassed the central bank's statutory minimum CRAR requirement of 12.50%, which includes the 2.50% mandatory Capital Conservation Buffer. In 2022 the bank established its major capital cushion at 16.00% CRAR. This capital cushion provided resilience against rising interest rates, foreign exchange volatility, and global macroeconomic pressure in the post-pandemic recovery era.
- From the table above we see that the total RWA expanded aggressively from BDT 295.2 Billion in 2021 to BDT 512.0 Billion in 2025. This represents a cumulative increase of 73.4%. The causes of the surge were- expanding corporate loan portfolios, digital retail financing, and trade finance lines. The asset expansion surpassed the Tier-1 capital growth, as Tier-1 capital declined from 11.70% to 9.10%, bringing total CRAR to 13.90%. The bank remained 140 basis points above the regulatory floor, although capital consumption increased.
- The bank maintained a strong earnings performance consistently across the 5-year period. ROE expanded from 14.80% in 2021 consistently and reached its peak in 2024 at 23.92%, then stabilized at 21.50% in 2025. ROA expanded throughout the years from 1.05% in 2021 to 1.42% in 2025. Robust profit generation resulted in increasing the retained earnings. This increase in retained earnings absorbed the incremental provisioning expenses caused by the rising NPL ratio, which increased to 5.60% in 2025 amid industry-wide credit stress.

9 Legal Compliance: Case Analysis & Impact Assessment

Case Overview

In the early 2026, the ACC initiated formal legal proceedings following an in-depth BFIU investigation into the unauthorized withdrawal and layering of BDT 11.84 Crore from corporate accounts managed by City Bank PLC. Senior relationship officers in the Institutional Banking Division collaborated with outside parties to execute unapproved Real-Time Gross Settlement (RTGS) fund transfers using forged documents.

Figure 9.1

Operational Failure Points

- The senior relationships tried to misuse internal credentials to bypass automated Maker-Checker authorization controls. Higher management urged subordinate "checkers" to approve transactions based on verbal assurance rather than through independent verification.
- Unapproved RTGS transfers were executed using fake signature cards and fabricated transfer requests. The funds were transferred to multiple layering accounts to obscure the transaction chain before being withdrawn or converted into assets.
- Although the bank's automated transaction monitoring systems flagged velocity and volume spikes, branch staff failed to escalate red flags to the AML and CFT Division. Delaying Suspicious Transaction Reports violated core BFIU operating directives.

Statutory Framework

- Money Laundering Prevention Act, 2012: Section 4(2) criminalizes converting, transferring, or concealing proceeds of crime. Section 4(3) sets penalties up to 12 years imprisonment and monetary fines, holding banking personnel directly liable for assisting illicit fund movement.
- Penal Code, 1860: Section 409 provides for life or rigorous imprisonment for criminal breach of trust by bankers. Sections 467, 468, and 471 establish severe criminal penalties for forging securities and using fraudulent instruments as authentic.

Steps Taken

- **More Employees:** While the AML department consisted of only 4 to 5 employees in the beginning, the regulators focused on expanding the man force. At present, the AML department consists of around 25-30 employees. The increase in man power helped the organization to allocate and run the tasks efficiently.

- **Automated Transaction Monitoring:** The bank invested in automated transaction monitoring heavily to ensure more security.
- **Sanction Screening and Monitoring System:** The system checks for individuals, entities and trade beneficiaries against domestic and international watch list databases to prevent terrorist financing and illegal global transfers. The bank is constantly updating the systems database to ensure safety.

Impact Assessment

Impact on Financial Performance: The unauthorized withdrawal and subsequent layering of BDT 11.84 crore created a significant financial risk for City Bank PLC. The bank could face direct financial losses, recovery costs, investigation expenses, and possible legal or regulatory consequences. The incident also highlights the financial risks associated with weaknesses in transaction authorization and monitoring systems

Impact on Operation & Internal Control: The case exposed weaknesses in the bank's Maker-Checker system, employee supervision, document verification, and transaction approval procedures. The alleged use of internal credentials to bypass authorization controls and approval based on verbal assurances indicate failures in following established internal procedures. The use of forged signature cards and fabricated transfer requests further demonstrates the need for stronger verification and segregation of duties for high-value transactions.

Impact on Reputation: The incident may adversely affect City Bank's reputation and customer confidence, as customers expect banks to maintain strong controls over their funds and transactions. Since the incident involved employees of the corporate banking division, it could particularly affect the confidence of corporate clients who conduct high-value transactions through the bank.

How City Bank Bounced Back

Following the incident, City Bank strengthened its compliance framework by expanding its AML department from around 4 to 5 employees to approximately 25 to 30 employees. The bank also invested in automated transaction monitoring and strengthened its sanctions screening and monitoring system to identify suspicious activities and screen customers and beneficiaries against relevant watchlists. These measures can improve early detection and reduce the likelihood of similar incidents. Overall, the case demonstrates that effective banking compliance requires not only advanced technology but also strong internal controls, employee accountability, independent verification, timely reporting, and continuous regulatory oversight.

CONCLUSION & RECOMMENDATION

City Bank PLC has grown into a diversified and competitive private commercial bank in Bangladesh. It has delivered solid financial results, broadened its services, and invested in digital banking, financial inclusion, and sustainability. Between 2021 and 2025 its CRAR stayed above the regulatory minimum, while profitability and shareholder returns improved overall.
The analysis also underlines the need for stronger internal controls and compliance. Unauthorized RTGS transactions revealed gaps in verification, staff oversight, and prompt reporting of suspicious activity. The bank has responded by expanding its AML team and enhancing automated monitoring and sanctions screening.

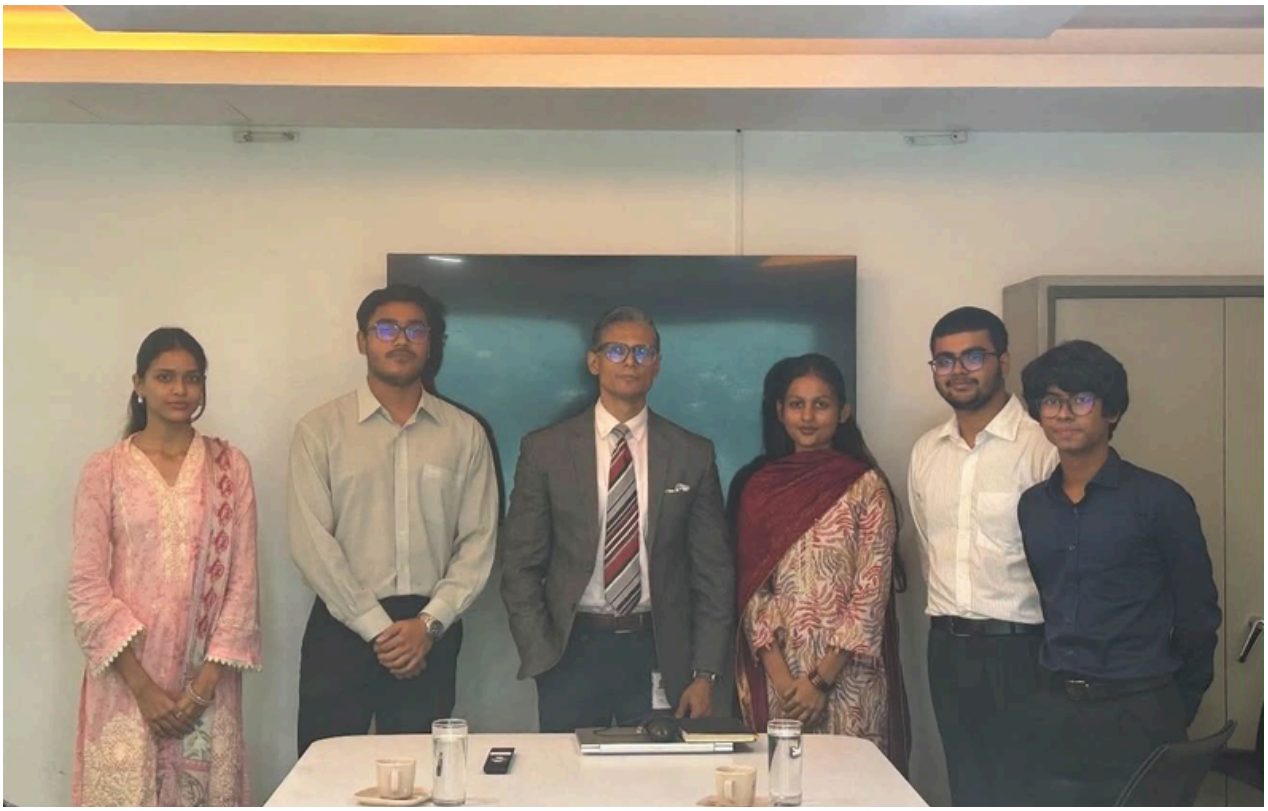

To ensure that City Bank PLC can strengthen its position in the long run, we recommend a few measures. They are the following:

- High-value transactions must undergo strict independent verification and proper authorization.
- Provide regular training and stronger supervision, especially for staff handling sensitive transactions.
- Detect and report suspicious transactions quickly through effective monitoring.
- Continuously strengthen the capital base as risk-weighted assets and business activities grow.
- Combine technology with strong human oversight to reduce operational and compliance risks.
- Ensure greater transparency, accountability, and swift response to control failures to safeguard reputation.
